HR analytics

Why employees take leave in specific time of the year or month?

Why sudden increase in the numbers of leaves like sick leave etc…?

How much % of work from home?

Leave analysis of company for a given year

We are with us company attendance dataset for 3 months.

I have performed some cleaning (unpivoting for column to row, DAX function for formulas, transpose the data in one sheet, header promote)

Working days and non-working days(%) etc..

I have designed dynamic solution for this project so it will work for new coming data.
